

Installation & Setup Guide

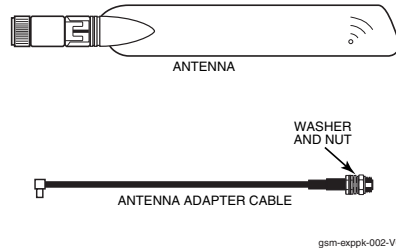

Introduction

The GSM-ANTHB Kit provides external antenna capability for GSM and iGSM communications devices.

NOTE: This antenna is for indoor use only.

Contents

This kit consists of an Antenna and Adapter Cable (for connection to the communications device).

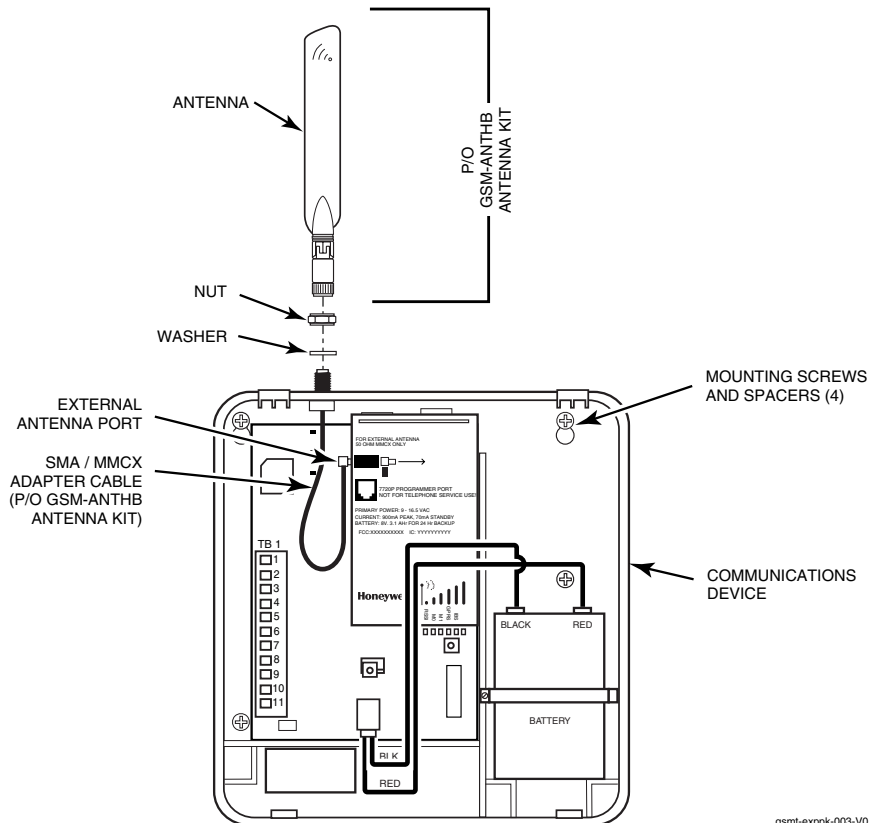

Assembly

To assemble, refer to the figure below and perform the following steps:

NOTE: Refer to the communication device's *Installation and Setup Guide* for mounting, wiring and programming information.

1. Remove the front cover from the communications device.
2. Install the through-hole connector of the adapter cable in the top hole on the enclosure back of the communications device. Secure with lock washer and nut.
3. Snap the other end of the adapter cable in the external antenna port of the communications device.
4. Attach the antenna to the connector on top of the enclosure. Replace the front cover.

800-02377 7/08 Rev. A
