## VIDEO VERIFICATION STARTER KIT

COMMERCIAL

RESIDENTIAL

### PRODUCT FEATURES

- ▶ Video clip of alarm event sent to the Central Station for priority police response.
- ▶ Video verification upgrade for all security alarm panels.
- ▶ Preconfigured for turnkey installation using Telguard\* cellular service.
- ▶ Includes an indoor wireless MotionViewer® (TG-IMV) with integrated camera and motion sensor.
- ▶ Easy install - totally wireless with up to four year battery life.
- ▶ Remote camera look-in via a smartphone (video clip or snapshot).
- ▶ Supports up to 24 TG-IMVs.

The TG-V2H Video Verification Starter Kit delivers priority police response for greater security. Telguard has private labeled Videofied's award-winning indoor video verification platform and combined it with Telguard's renowned cellular service to allow security dealers to upgrade new and existing security systems to deliver prioritized response via true video verification.

The Telguard video verification solution sends a video clip of the actual incident to the central station for immediate review and dispatch. The central station operator essentially becomes a virtual eyewitness allowing police to respond to a video-verified alarm as a crime-in-progress.

#### Easy Upgrade

The starter kit, which includes a Telguard Video Verification Hub (TG-V2H) and an indoor wireless Telguard MotionViewer® (TG-IMV) with integrated camera and motion sensor, works with any security panel so existing customers can be upgraded to video verification quickly and easily. The TG-IMVs arm or disarm when the host panel is armed or disarmed for a seamless customer experience.

#### Cost-Effective Monitoring

Affordable monitoring costs are crucial to offering Priority Response. Together with Videofied's preferred indoor monitoring partners, Telguard can provide video verification monitoring at the same cost as a traditional alarm.

For a list of recommended whole sale monitoring partners visit: [partners.videofied.com](http://partners.videofied.com)

#### Smartphone App

In addition to sending video to the central station, the business owner or other end user can remotely access the MotionViewer cameras via a smartphone app to request video clips or snapshot photos.

#### Video

- Resolution: QVGA (320x240).
- Length: 10 Seconds.
- Default File Size: +/-220Kb.

#### Snapshot

- Format: JPEG.
- Resolution: Up to VGA (640x480).
- Typical File Size: 8Kb.

### Indoor MotionViewers®

TG-IMV MotionViewers are the critical devices that provide video verification for whatever or whoever has tripped the MotionViewer. MotionViewers deliver priority police response to your customers' property for a real intrusion. Costly false alarm fines can be avoided if an animal trips the MotionViewer.
